

EU AI Policy

Make it Real!

Capgemini

Risk-Based Approach & Roles

- Unacceptable risk is prohibited (e.g., social scoring, manipulative AI)
 - High-risk systems are regulated with stringent obligations
 - High-risk systems are regulated with stringent obligations
-
- Providers (developers) bear most obligations for high-risk AI
 - Deployers have obligations when using high-risk AI
 - Deployers have obligations when using high-risk AI

GPAI & Compliance

- Technical documentation and information for downstream providers
- Copyright compliance and training-data summary publication
- Additional duties (evaluations, incident reporting, cybersecurity) for systemic models

Biometrics — Remote biometric identification

Employment — Candidate screening & performance monitoring

Education — Admission and outcome evaluation

Critical infrastructure — Traffic and utilities management

Key Takeaways

- Map your AI portfolio to risk tiers and Annex categories
- Establish quality, oversight, and documentation workflows
- Prepare for GPAI transparency and potential systemic-risk duties
